

**Association of Chartered Physiotherapists in
Oncology and Palliative Care
Research Directory – Issue 3: Summer 2017**

Welcome to the third edition of the ACPOPC research directory. We have collated a list of recent research articles that are relevant to physiotherapy in oncology and palliative care, from a range of peer reviewed publications. A clickable link to each article is at the end of the citation, with some providing free full texts. For help accessing articles which do not provide free content please contact the research officer. Articles have been divided into sections to help members find those most relevant to them.

The volume of research in palliative care and oncology that is relevant to physiotherapists continues to expand quite dramatically. The shift towards considering the lifelong needs of cancer survivors, as well as the widening of palliative care for those with non-malignant as well as malignant disease provides a huge opportunity for physiotherapists to demonstrate the beneficial affect we can have for these patient groups. You may find it interesting to pick one of the articles for a journal club, either with other therapists at your place of work or your ACPOPC regional network. Follow @ACPOPC on twitter for regular updates on research findings as they happen.

We would recommend that you read these articles critically and consider their application to your practice. These articles have not been critically reviewed by the ACPOPC Committee. For guidance on critical review of articles please see the following CSP guidance: <http://www.csp.org.uk/professional-union/library/bibliographic-databases/critical-appraisal>

If you have an article published in a peer-reviewed journal, please contact the research officer to ensure it is included in the next edition of the research directory.

General Palliative Care

Banerjee, G., Rose, A., Briggs, M. & Johnson, M.I., (2017). Could kinesiology taping help mitigate pain, breathlessness and abdominal-related symptoms in cancer? *BMJ Case Reports*, Published Online DOI: 10.1136/bcr-2016-216695. [Free Full Text](#)
